

## **\_ Company profile \_**

**Trevi** is a company specialized in the field of special foundations and soil consolidation works and belongs to the **TREVI Group**, a worldwide leader in the foundation engineering and in the design and production of relevant rigs and special equipment.

The TREVI Group is also active in the drilling field (oil, gas and water), both for the production of systems and for the supply of services and it is also involved in the emerging sector of renewable energies (wind and geothermal powers).

It was established in Cesena in 1957 and it achieved a remarkable specialization in the sector of foundation engineering, hence being its leadership worldwide acknowledged as for the execution of various types of intervention.

This is the case of special foundation works which are necessary to support complex projects developed by humankind, the excavation of tunnels, the consolidation of soils (*i.e. the restoration of the leaning Pisa Towers, among the many achievements*); repair works for dams, the recovery of polluted sites and the execution of automatised underground car parks. A transversal competence which found and still finds a never-ceasing application in each corner of the world.

The success of the Trevi Group is based on the integration and therefore on the continuous exchange between the technological and process innovation among the divisions making up the Group: Trevi and Soilmec (*producing and developing rigs and systems for the foundation engineering*); between Drillmec which produces and develops drilling systems (oil, gas and water) and Petreven which supplies oil drilling services.

The holding (*Trevi – Finanziaria Industriale S.p.A.*) has been listed in the Milan Stock Exchange since the month of July 1999.
